

# Fortilac<sup>®</sup>

## Baby Cereals

Complete foods for your baby

# High quality baby cereals to start food diversification

## Start from 6 months on

The whole FORTILAC range can be consumed by infants and young children from 6 months on. Thanks to its diversified recipes the FORTILAC range switches baby's diet and lets them discover new tastes. Furthermore, FORTILAC Rice-Milk is gluten free.

## Fortilac is source of proteins

Proteins are essential for the growth of children. They participate in the daily renewal of muscle tissues. They also contribute to the functioning of the body, especially in its defence against diseases. They act via enzymes in numerous biological functions.

## Contains essential vitamins

Fortilac products contain 9 vitamins, each playing a role in organism balance. For example, vitamin A contributes to eye health.

FORTILAC is manufactured under meticulously controlled conditions and meets all the CODEX regulations for processed cereal-based foods destined for infants and young children.

FORTILAC production is carried out in a plant certified by the BRC quality system and awarded with AA grade.

## Building strong bones

FORTILAC cereals help babies to develop a good bone structure. Proteins are used to build bones and calcium, in synergy with vitamin D, ensures they are strong.

## Helping babies to grow

Iron, zinc and iodine are essential building blocks of the immune system. Fortilac contains vital minerals that protect the infant from deficiencies and contribute to their optimal development.

## Helping to digest

Thanks to a unique technology, the cereals are partially hydrolyzed so Fortilac is easy to digest.
